Trust-first design

Frontend prototyping

Experience 2+ years · Designs in Figma, ships the front-end himself

J

UI/UX Designer · Frontend Developer

2025 — Now

Freelance & self-initiated · Dubai, UAE

- Designed and shipped 3 self-initiated UI/UX case studies: **ARIA** (Dubai luxury real estate, MERN), **Talabat** (speculative MENA mobile checkout, 4 screens collapsed to 1), and **Focusr** (productivity, 11 screens). Ran user research, built wireframes, hi-fi prototypes, and a decision log for each.
- Researched real friction in each category before designing: aggressive popups on Dubai property sites, multi-step checkout drop-off in food delivery, decision fatigue on productivity apps. Used findings to make specific UX calls in each case study.
- Built component libraries and a responsive 4-breakpoint design system in Figma for ARIA. Shipped 2 of the 3 case studies as live React + Tailwind front-ends on Vercel. Code is a side advantage, not the main job.
- Side: portfolio review and CV design for contacts entering the UAE job market. Quick iteration. Direct feedback.

O

Product Designer (UI/UX + Frontend)

2024 — 2025

Orion Space · Bhaktapur, Nepal

- Led brand identity, information architecture, full screen set, and component library for Nepal's first pico-satellite company. 5-week scope. Shipped to Vercel staging.
- Decided not to rebuild the existing Tindie checkout. Saved roughly 4 weeks. Let the brand site focus on positioning, founders, and mission.
- Cross-functional work with the founding team. Mapped two simultaneous user flows for two audiences: hobbyists buying kits via Tindie, institutions inquiring about partnerships through a new contact path.
- Designed in Figma. Built the responsive React site myself.
Tools: Figma, React, Tailwind, Vercel.

B

Junior Product Designer (UI/UX + Frontend)

2023 — 2024

Bal Kalyan Vidya Mandir · Biratnagar, Nepal

- Designed and shipped the first website for a 40-year-old school. **~3,285 students** use it for admissions. Replaced 6 manual channels (phone, email, paper, walk-ins, staff memory, word-of-mouth) with one online registration. **Live for ~24 months.**
- Built information architecture from scratch. Single-CTA homepage on the assumption parents come with one job: enroll a child. Inline form validation with plain-language errors. Held up across 2 years of real traffic.
- Worked with the school's admin team on form workflows and content. They've used the admin without retraining since launch.
- Designed in Figma. Built the responsive React + Vite + Tailwind front-end myself. Maintenance handed back to the school's internal team.
